

Simmer's Sky

Japanese Airports vol.1 (update)

Thank you for downloading the update program for “Japanese Airports vol.1”.
In this document we will describe the installation procedure for this update.

Reminders for the update file

In this update file, both previously known bugfixes and additional data are included.

- Taxi way lights' brightness has been increased, in all 5 airports.
- Airport ground vehicles and 3D general vehicles have been added to all 5 airports.
- For Amami Airport, its photo scenery has been fully rebuilt. ie: Apron has been extended, while apron itself and textures of taxiway, parking area were newly created.
- At Kumamoto Airport, a new control tower has been added.
- At Sendai Airport, Sendai Airport Railway's station was build at a place of former parking area.
- Support for Airport Enhancement Services (AES) software (Only on FS2004).

Read before Installing

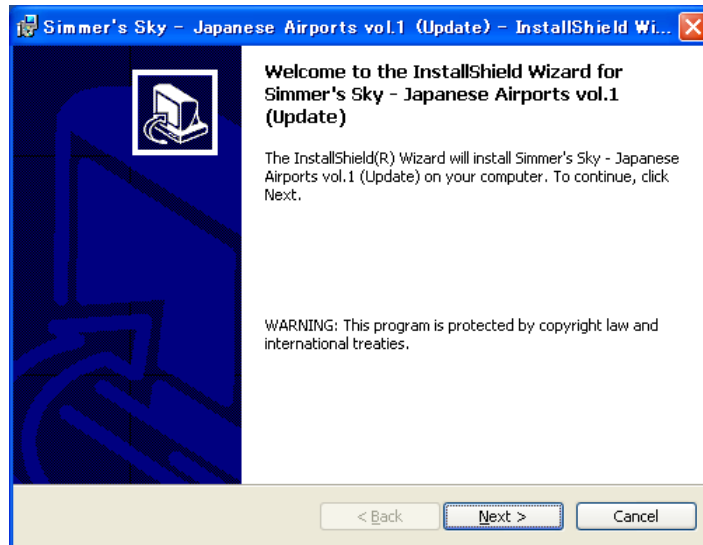

To use this update, following software programs are required:

- **Microsoft Flight Simulator 2004** (“FS9”) or **Flight Simulator 2002** (“FS8”)
 - **Simmer's Sky - Japanese Airports vol.1**
- Japanese Airports vol.1 should be installed prior to this update.
- To install this update, Password (Register Code) is necessary.
- If you have already registered to the scenery library and registering facility data (AFCAD) files, you need to do “Deletion of a scenery library” and “Restoration of AFCAD” before the installation.

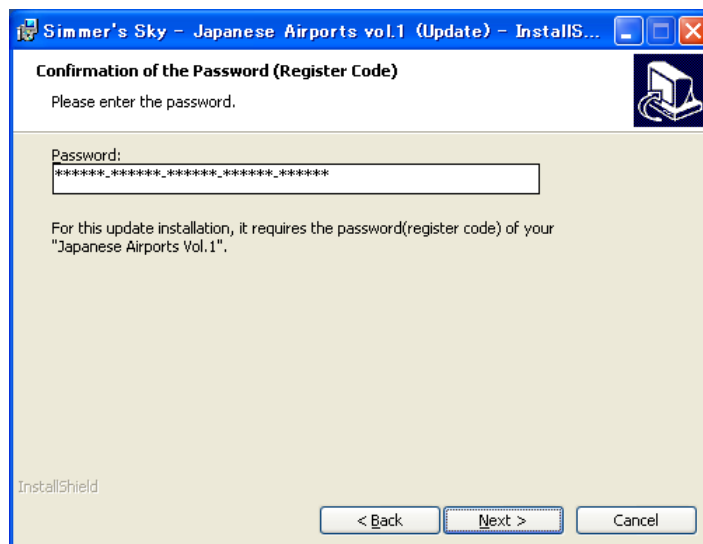

Installing the update

Follow the instructions below:

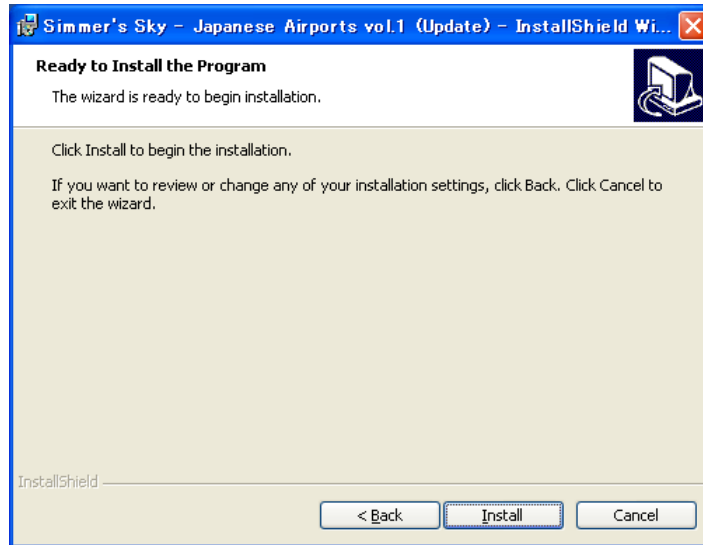

1. Execute the update file by double clicking the downloaded program (ja1_update.exe). Within a while, Install Shield Wizard will start installation procedure. When it is done, you will see a window shown below. Click [Next] to proceed.

2. First you will be asked to fill in the Password (Register Code) of your Japanese Airports vol.1. Enter the password, then click [Next].

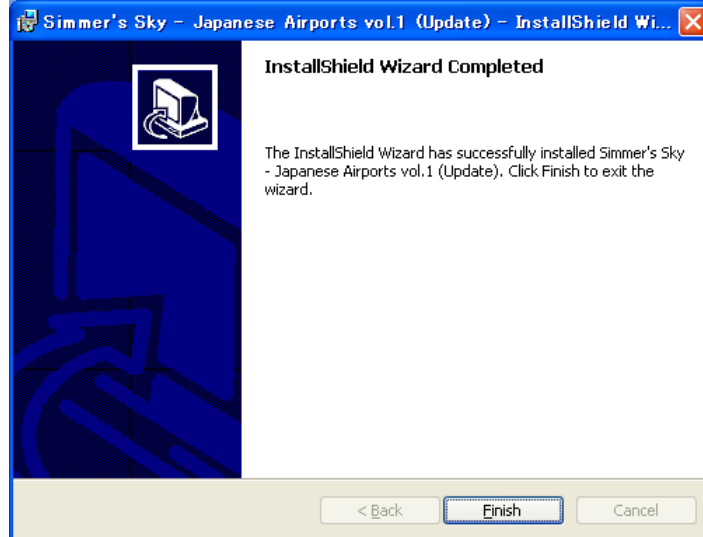

3. When a window below appears, click [Install].

4. The installation will take a while. Wait until it finishes.

5. If it is done, you will see a window below. Click [Finish], now the installation is complete.

6. When the update is successfully installed, launch "Setup Tool" and define the preferences.

< The usage of the "Setup Tool" >

There are 2 types of "Setup Tool" included; for 2004 and for 2002.

You can register or delete scenery files, and also register or restore AFCAD files.

"Setup Tool" can be launched from Start menu;

(Start - Programs - Simmer's Sky - Japanese Airports – JA1 Setup Tool)

■ Registering the scenery library (FS2004/FS2002):

1. Click "Register the scenery library" button.
2. When the check screen is displayed, click "yes" button.
3. Click "OK" button and Registration of scenery library is complete.

■ Registering the AFCAD file (FS2002):

1. Click "Register the AFCAD file" button.
2. On the airport selection screen, choose the desired airport and click "OK" button.
3. Please follow directions of a screen.

Uninstalling Japanese Airports

To uninstall Japanese Airports vol.1, first you need to uninstall the update programs described below before uninstalling the program.

- Simmer's Sky - Japanese Airports vol.1 (update) - uninstall first
- Simmer's Sky - Japanese Airports vol.1

1. Go to the Windows Start Menu. Open [Settings] - [Control Panel]. Double-Click on [Add/Remove Programs].
